

Office Air Cleaner, OAC250

Competitive Advantage: Quiet, effective (electrostatic media, ionization, activated carbon), high quality (5 year warranty). Electrostatic media uses static charge to capture allergens and particles down to 0.3 microns. Enables greater air flow in the room compared to HEPA filters while achieving the same level of air purification. HEPA filters must be denser to get the same filtration level as the Filtrete brand and so generally machines using HEPA filters are noisier and consume more electricity

Benefit: Ensures a healthier/cleaner working environment to boost productivity. There is a growing awareness of air quality issues within the office environment. The OAC250 cleans a 16'x20' space.
